

## A VIRTUAL TRIP - **Death Valley**

COURSE 9505

As the hottest, driest and lowest National Park, Death Valley is a land of extremes. More than just a scorching desert, Death Valley offers park visitors a striking contrast of landscapes to explore -- from the snow that frosts the park's towering peaks to the lush wildflower meadows and small oasis that provide a reprieve from the heat to seemingly endless desert plains. Located in both California and Nevada, it's the largest of the National Parks in the lower 48 states. This is an absolutely fascinating place, and yes, the famous Road Runner really is an inhabitant. To get more facts, click here:

['12 things you didn't know about Death Valley'](#) Intrigued? Since we can't currently make the trip, it still would be fun to see what it's like in the "Hottest Place on the Earth". To participate, please click on the following blue underlined links and enjoy the show.

["Episode 1 Death Valley Explorer"](#) - DURATION: 9 minutes, 38 seconds. In this lowest, hottest and driest place in North America, extreme heat and aridity characterize the landscape. Yet in this land of surprises, life has found a way to thrive.

["Episode 2 Ghost of Water"](#) - DURATION: 7 minutes, 57 seconds. From dry lakes to flowing streams, water continues to shape this landscape in dramatic ways.

["Episode 3 Sand Dunes"](#) - DURATION: 9 minutes, 59 seconds. Death Valley is a world of wonders! Learn more about shifting sands and the life that thrives within the dunes.
